National Utilities Refund
WE FIND, YOU SAVE

BACKUP POWER PROGRAM

The generator that *pays for itself.*

Backup power keeps you running when the grid goes down. We pay you every year to have it, and a fixed-price energy contract of up to 10 years shields you from wholesale price swings.

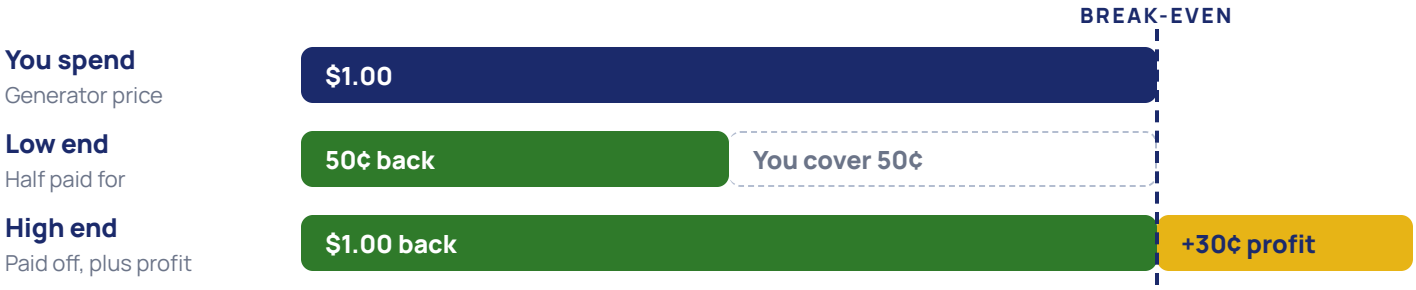
EARN UP TO

$145K

per MW, every year you're enrolled. Typical range $85K-$145K.

THE RETURN

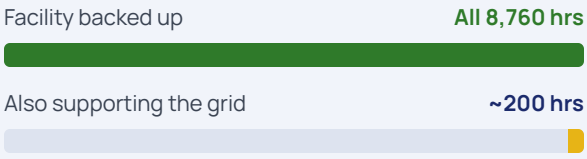
Put $1 into a generator. Get 50¢ to $1.30 back.



WHY WE PAY YOU

The grid is overloaded and needs support at peak times. For about 200 hours a year, your generator runs to help, and it keeps powering your facility the whole time. You're paid an upfront subsidy, annual payments and a fuel credit.

Fuel credit: $100/MWh generated, roughly $10/Dth of gas



Your facility runs on the generator during grid support too, so you're covered even then.

FROM FIRST CALL TO FIRST PAYMENT

1 — Discovery call
We estimate your payments.

2 — Apply
Share a utility bill.

3 — Site survey / install
A local dealer installs it.

4 — Get paid
Enroll and payments begin.

What could your site earn?
